

Tier1 - Series Reverse Osmosis Systems

TIER1 – Series Reverse Osmosis Systems are engineered in response to the need within the light commercial markets. The Tier1 – Series systems provide a cost–effective solution for customers and are easy to install and maintain. These systems are designed to be wall mounted or free–standing and feature a 5 – Micron Sediment and 10 – Micron Carbon Pre–Filters, Slim Line Filter Housings and RO membrane and membrane housings.

TIER1 – Series Reverse Osmosis Systems are available in models ranging from 350 to 700 gallons per day (GPD), at a line pressure of 70 psi.

The models can also be upgraded with an optional cover that includes pressure gauges and a dual TDS meter.

[†] Low temperatures and feedwater quality, such as high TDS levels will significantly affect the systems production capabilities and performance. Computer projections must be run for individual applications which do not meet or exceed minimum and maximum operating limits for such conditions.

th System pressure is variable due to water conditions. Permeate flow will increase at a higher temperature and will decrease at a lower temperature.

^{*} Does not include operating space requirements.

^{**} Product flow and maximum recovery rates are based on feedwater conditions as stated above. Do not exceed recommended permeate flow.
